

A chatbot that knows your company's documents, and shows its sources.

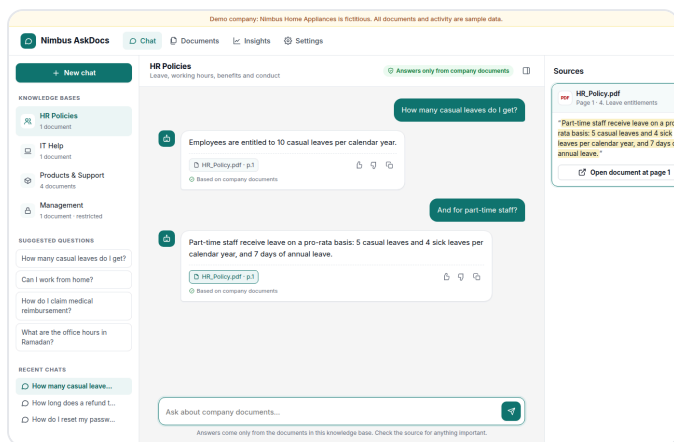

Staff and customers ask in English, Urdu or Roman Urdu. Answers come only from your PDFs, policies and FAQs, with the file and page every time.

THE PROBLEM

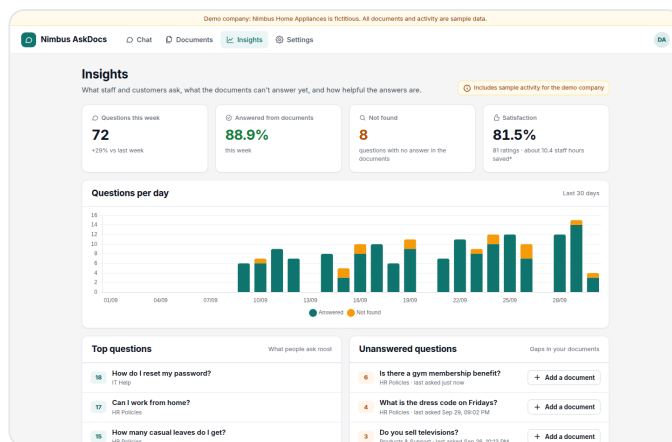

HR, IT and support answer the same questions every day. The answers are in documents nobody can find quickly, and generic chatbots make things up.

THE SOLUTION

- Answers only from your documents, with page-level sources
- Says "I couldn't find this" and offers a human
- Follow-ups, Urdu & Roman Urdu, confidential access control
- Insights on top questions and knowledge gaps; website widget

Every answer shows its source; the passage is one click away.

Insights: top questions and the gaps in your documents.
